Does the light phone 2 have music

The Light Phone 2 is a recreation from the digital world, and it works, but its high price is repulsive. Compact, looks pretty easy Sync for contacts three-day battery life Does you go off the grid Works as a stand-alone or secondary phone expensive ghosting on the screen, small text A bit too easy at the moment Micro USB charging port Want a lot on a smartphone for the holidays? Check out our favorite Black Friday smartphone deals. Quiet with a hint of fear. That's what I felt at first when I used the Light Phone 2, a feature phone that removes the apps and notifications that consume every awakening moment of our lives. This fear eventually left me, and I found myself more present and occupied with what I was doing. The Light Phone 2 is a 4G feature phone (or dumbphone) with an e-ink screen. It can make calls and send texts. That's it. The catch? It's silly to be priced at 350 dollars, especially if you can find feature phones for less than 100 dollars. Still, there's something about the Light Phone 2 that thrilled me. Use it for a few days and you will feel the need to constantly check your phone leaving your mind. It's a break from the digital world. A smarter feature phone Light first phone - aptly called the light phone - looks beautiful, but all it can do is place calls. In a world where messaging is king, it's natural that the company's follow-up in Brooklyn adds text features. But that's not all that's planned for this Indiegogo-funded phone. The Light team understands that there are certain amenities that many of us rely on every day, from ride-sharing apps and Google Maps to music streaming and even with a calculator. These services do not keep us absorbed in our phones like Instagram or Facebook, but are end-to-end experiences. Julian Chokkattu/Digital Trends These are definitely not distractions; These are great tools, Light CEO and co-founder Kaiwei Tang told Digital Trends. We have our own principle, which tool makes sense; We don't want email, we don't want social media, we don't want entertainment. That's why there's no camera. Tang said there were internal discussions about equipping a camera on the Light Phone 2. While cameras can be great tools, the company found them disruptive as people take photos of everything, upload them to social media and count the likes that come in. At the moment, the features on Light OS are pretty ... good, easy. You can make calls, send texts and set an alarm. But more tools are on the way, possibly by the end of the year. These include a calculator, hot spot, a Find my phone service, third-party, turn-by-turn directions and an MP3 player (there is a headphone jack). The MP3 player can be a Spotify integration – or another music streaming service – that allows you to play tracks from a single playlist instead of allowing detection features. In this way, it prevents you from spending too much time on your phone hunting for music. We don't want e-mail, we Social media, no entertainment. Unfortunately, none of these features are available yet, but I will update this section when they are launched later this year. Light said there's a chance that other tools will also come to the phone, including voice notes, notes, a calendar, a weather app and a dictionary, but there's no guarantee. Nevertheless, this is one of the most interesting aspects of light phone 2. Most feature phones don't have access to services like ride-sharing apps or maps, and those that do – like Nokia phones with KaiOS – also have apps like YouTube and Facebook that don't help with the problem of limiting screen time. The Light Phone 2 gives you the best of both worlds. Using the Light Phone 2 Light OS is dead easy to use. There's a lock screen -- you can add a passcode if you want -- and when you tap the middle button on the right edge, you'll be greeted by your apps, which are currently phone, alarm, and settings. You need to go to the Light Dashboard on a computer to activate your phone during setup, which interferes with the process a little bit. Here you can connect your iCloud account to sync contacts. Android owners can download a Virtual Contact File (VCF) or vCard file from services such as Google Contacts and upload it to the Light Dashboard. My contacts were synced to Light Phone 2 within minutes; it was seamless. Julian Chokkattu/Digital Trends You can use the Light Phone 2 as a standalone phone, or you can use it as a secondary device and connect your phone number to it via carrier services such as AT&T's NumberSync. Light also offers a Light Phone plan if you don't want to deal with carriers, and it costs USD 30 per month for connectivity. Back to the phone, the operating system reminds me of Windows Mobile because it is purely text-based with a few icons. It looks elegant, modern and is effective. Tap a contact, and you can view a conversation thread with options to call the person or type a message. Tap anything on this E Ink screen is a little slow, so you need to be patient. Even waking up the screen takes a second or two longer than I want, but these are minor inconveniences. The call quality is strong, although the speaker doesn't get as loud as I would like – you have to hope that the person at the other end is not a soft speaker. Texting a person forces the screen in landscaped orientation as you type, and typing is a slow task. Not only are the buttons small, but since the touch response is also slow, it's easy to confuse. There is no draggable cursor or So if you make a mistake after you have written an entire sentence, you need to clear your way back to the bug to correct it. It's annoying, but after using it for a few days, I've become accustomed to intentionally typing slower than normal. You also can't see pictures, even though emojis are a fair game (you just can't send them). Julian Chokkattu/Digital Trends There are other peculiarities. The text is small, and there is no way to resize it. Change, which can enlarge their smartphone screens may have difficulty reading here. There's also a lot of ghosting, which is when you see weak images and artifacts from a previous screen. The screen flashes frequently and creates a clean slate for the e-ink display to remove these artifacts. While ghosting didn't interfere with my use of the phone, it can be distracting. With a louder speaker, a slightly larger screen to allow for larger text (and a larger keyboard), and a cursor that you can reposition, it would have been a long way to create a better experience. It's not all negative. The best part is the size, weight and appearance of the Light Phone 2. It is tiny, fits easily into the palm of my hand and hardly takes up any space in my pocket. The edgy look is modern and slim, even if the bezels around the screen are thick. The polycarbonate body is a bit slippery, but it doesn't feel cheap as there's a nice weight, so the phone feels substantial. Battery Life The light phone 2 took me three days with a single charge. That's good if you compare it to a smartphone, but bad when you look at battery life on other E Ink devices; A Kindle can last for .B weeks. Nevertheless, three days of juice is more than enough for me. In the standby conversation, Light claims that the phone lasts up to seven days. I think Light would have added a USB-C charging port instead of a micro USB port. My smartphone, laptop and mirrorless camera can all be charged with a USB-C cable, but I still need to use a micro USB cable just to charge the Light Phone 2. There are smartphones with USB-C that cost 160 dollars, so it really shouldn't have been much trouble for Light to record one here. Digital Reprieve It may sound like I didn't have the best experience with the Light Phone 2, largely out of the idiosyncrasies of an E Ink screen. Although the problems are real, I've still enjoyed my time on the phone while fulfilling its mission: curbing my smartphone addiction so I can focus on the people and the environment around me. The phone's minimalist design and visually appealing interface contribute to this experience. I can't use the Light Phone 2 as a smartphone replacement - it just wouldn't work with the nature of my job. It's also not the best option for people who barely use SMS to chat with friends and family – support for third-party messaging apps would be a boon. For me, it's perfect as a weekend phone if I want to disconnect. I still have a decent amount with my girlfriend, friends and family sms on it and even have a few phone calls. Not having other notifications constantly popping up on the phone when I'm on the go is satisfying, and it also makes home to a smartphone filled with notifications more enjoyable. But ultimately the biggest mistake with the Light Phone 2 is its price. The price tag of 350 dollars is far too high for what you are getting at the moment. While most feature phones don't look so attractive, they can be bought cheaply for dirt if all you want to do is make text and make and you can use it as a second phone if you want to restrict your smartphone usage. But ultimately the biggest mistake with the Light Phone 2 is its price. There are also ways to limit screen time on your existing smartphone through features like Screen Time on iOS and Google's Digital Wellbeing on Android. The latest version of Android even has a focus mode that allows you to block notifications from specific apps. Although these tools aren't as effective—and require a little willpower—they won't reset you either. But it all depends on how well the coming tools work and how many arrive. If Light can add features such as access to ride-sharing apps, turn-by-turn navigation, and other important tools with end-to-end experiences, the Light Phone 2 offers something you won't find on a dumbphone with privacy and digital well-being in mind. Price, availability and warranty information The Light Phone 2 costs 350 USD and can be ordered on the Light website. Indiegogo and Kickstarter supporters now get their units, but new orders will be delivered in mid-October. The device works on AT&T, Verizon and T-Mobile, but Sprint subscribers aren't lucky. You can buy a Light Phone plan worth USD 30 per month from Light for connectivity if you don't want to be related to your mobile operator, but you won't be able to sync the phone number with your personal one. Light offers a standard-limited warranty that covers manufacturing defects for one year from the date of purchase. Our Take The Light Phone 2 is a promising feature phone that is held back by its high price tag, but its value will increase as Light releases more apps for it. Is there a better alternative? There is no shortage of feature phones you can buy, from LG Exalt LTE to Alcatel Go Flip V. The best are phones from HMD Global that makes Nokia branded phones. Its feature phones, such as the Nokia 3310 and the Nokia 8110 4G, look beautiful and have smart features. Unfortunately, they are not sold directly in the US, and while you can buy them on Amazon, they will not support most US networks. Other options in this price range include the Samsung Galaxy A50 and Google Pixel 3a. These are full-fledged phones with everything you would expect from a modern device. This underlines the price problem of the Light Phone 2. These devices from Samsung and Google are much, much, much more powerful. How long will it take? The Light Phone 2 will take about two to three years, maybe more, before you start having battery life issues. It is IPX3 rated, which means it is splash-proof and will be fine in the rain, but it a bath in a pool does not survive. Its lifespan will also depend on the frequency of updates of light, which has yet to prove itself. It's a bit of a gamble. Should you buy it? No. The Light Phone 2 has an admirable mission. But why pay so much for a device without so many features? Editorial Recommendations
